

AKINOLA ADEJOKE ELIZABETH

Full Stack & Blockchain Developer

Multi-Chain: Bitcoin L2 - Stacks - EVM - Solana - TON - StarkNet

Lagos, Nigeria | +234 907 950 9420 | akinolaa769@gmail.com | github.com/natureloved | linkedin.com/in/akinola-adejoke | x.com/adejoke_btc | [adejoke](#)

PROFESSIONAL SUMMARY

Self-taught full-stack and multi-chain developer with 12 shipped products across 8 blockchains - 6 of them live DeFi applications - and a flagship Bitcoin L2 aggregator built on Stacks. Writes smart contracts in Clarity and Solidity (plus Cairo on StarkNet), ships production frontends in Next.js, React and TypeScript, and wires AI throughout the stack: Claude-powered intent parsing, AI copilots and keyless agentic automation. Alumna of the official StarkNet developer program, the Urbe Campus Ethereum residency and the Bitcoin Dada pioneer cohort, with six further fellowships and bootcamps in flight. Deepest focus: Bitcoin L2 infrastructure - aggregation, prediction markets and on-chain inheritance. Open to full-stack and blockchain engineering roles, grants and collaborations (remote or Lagos).

TECHNICAL SKILLS

Languages & Smart Contracts:	Clarity (Stacks), Solidity (EVM), Cairo (StarkNet), TypeScript, JavaScript, Python
Blockchains:	Bitcoin (L2, Runes), Stacks, Ethereum / EVM, Solana, StarkNet, TON, Monad, Avalanche, Nimiq
Frontend:	Next.js, React, TypeScript, Tailwind CSS, Vite, Recharts
Backend & Data:	Node.js, Python, Supabase, SQLite, REST and DeFiLlama API, web scraping, automation
Web3 Tooling:	Clarinet, Foundry, wagmi, Stacks Connect, WalletConnect, LI.FI routing, SIP-009 NFTs, Telegram Bot API
DeFi Domains:	Aggregation dashboards, prediction markets, yield vaults, staking, remittances, on-chain inheritance
AI Integration:	Anthropic Claude - NL intent parsing, AI copilots, keyless autonomous agents (Claude Certified Architect, in progress)

SELECTED PROJECTS

Staxiq **Bitcoin L2 DeFi Aggregator & AI Copilot - FLAGSHIP** Stacks, Clarity, Next.js, React, DeFiLlama [staxiq.vercel.app](#)

- Built the 'Zerion of Bitcoin L2': one unified dashboard to discover, compare and manage Bitcoin DeFi, aggregating ALEX, Velar and Bitflow (280M+ combined TVL).
- Hardened production wallet UX by optimising the @stacks/connect v8 callback flow for reliability at scale.
- Layered an AI copilot over live protocol data to turn positions into actionable decisions.

Voz **Voice-First Cross-Chain Remittance - DEV3PACK** Claude AI, LI.FI, Solana, Next.js [voz-three.vercel.app](#)

- Senders speak intent in plain language ('send \$50 USDC to Sarah via LI.FI'); Claude parses it into a structured, executable transaction.
- LI.FI routes settlement across chains straight into the recipient's Solana wallet - no addresses typed, no chains chosen.
- Shipped end-to-end in 48 hours.

Deadman Vault **On-Chain Crypto Inheritance Protocol - STACKS** Clarity, Stacks, USDCx, Next.js [deadman-vault-eta.vercel.app](#)

- Trustless inheritance: lock USDCx in a vault and prove liveness with periodic heartbeat check-ins.
- A missed window automatically splits funds to designated heirs, with optional vesting cliffs - zero lawyers required.

ClarityQuest **Gamified Smart-Contract Learning Platform - STACKS** Clarinet WASM, Clarity, SIP-009 NFTs, Next.js [clarityquest-d](#)

- 20 progressive smart-contract challenges that run entirely in the browser via Clarinet WASM - real code, instant test feedback, XP and leaderboards.
- Mints SIP-009 NFT badges on Stacks mainnet as tamper-proof proof of skill.

Proof of Rest **On-Chain Commitment Device for Builders - MONAD** Solidity, Foundry, wagmi, AI Agents [proof-of-rest.vercel.app](#)

- Stake MON to lock a timed work session; finish in time to reclaim it plus a share of the reward pool, overrun and forfeit a cut.
- Contract-enforced cooldowns with soulbound streak badges.
- Built RestGuardian, a keyless AI agent that constructs and simulates transactions without ever holding signing keys.

TonPilot **Agentic Wallet Automation on Telegram - TON** TypeScript, TON, Telegram Bot API, DeDust [t.me/TonAutoPi](#)

- Telegram-native wallet automation: plain commands ('/stake 100 TON to LP') execute on-chain - staked to DeDust at 18.4% APY.
- Security-first design that streamlines on-chain interactions without exposing keys. Live in production on Telegram.

ALSO SHIPPED

Runes Rumble -
Trustless prediction market for Runes, Bitcoin's newest token standard (MIDL Hackathon).

StashFlow -
Goal-based DeFi savings - deposit into LI.FI Earn yield vaults and watch goals compound (DeFi Mullet).

HashPilot -
Retro-futuristic mining-intelligence terminal pairing real-time Avalanche data with AI decision support (Hashathon).

TipWall -
Decentralised NimiQ tipping wall for creators - wallet-signed profiles, fundraising goals, zero platform fees.

ExpatShip -
Authenticated cross-border shipping portal: instant duty-inclusive quotes, customs invoices, live tracking (React, Supabase).

Tasky -
Invite-gated Telegram bot that scans public feeds and pushes real-time crypto bounty, airdrop and gig alerts (Python, SQLite).

FELLOWSHIPS, PROGRAMS & CERTIFICATIONS

Completed

- StarkNet Developer Program (official) - Cairo and ZK-rollup fundamentals.
- Urbe Campus - Ethereum Developer Residency, Rome-based Web3 community.
- Bitcoin Dada - Pioneer Cohort, African women building on Bitcoin.

Active / In Progress

- Bitcoin Diploma Course - protocol architecture, consensus, global economics
